

Q.8) Write a Program to replace all occurrence of a substring with a new substring.

```
def substring_replace(input_strg, old_substrg, new_substrg):
```

```
    Result = input_strg.replace(old_substrg, new_substrg)  
    return Result
```

```
user_input = input("Enter the main string: ")  
old_substrg = input("Enter the substring to replace: ")  
new_substrg = input("Enter the new substring: ")
```

```
new_string = substring_replace(user_input, old_substrg, new_substrg)
```

```
print("Modified string:", new_string)
```
