

Q.4) Write a program to replace all the spaces in the input string with * or if no spaces found, put \$ at the start and end of the string.

```
def new_string(input_string):
```

```
    if ' ' in input_string:
```

```
        return input_string.replace(' ', '*')
```

```
    else:
```

```
        return f"${input_string}$"
```

```
user_io = input("Enter a string: ")
```

```
new_string = new_string(io_input)
```

```
print("Modified string:", new_string)
```
