

Q.25) Program to remove all duplicate elements from a list

```
def duplicates_removal():
```

```
    Numbers = list(map(int, input("Enter numbers separated by space: ").split()))
```

```
    numbers = []  
    seen = set()
```

```
    for num in numbers:  
        if num not in seen:  
            unique_numbers.append(num)  
            seen.add(num)
```

```
    print("List after removing duplicates:",Numbers)
```

```
Duplicates_removal()
