

Q.31) Program to completely remove duplicate elements without keeping any copy.

```
def duplicates_removal(lst):  
    from collections import Counter  
  
    elements = Counter(lst)  
  
    list = [item for item in lst if elements[item] == 1]  
  
    return list  
  
nums = list(map(int, input("Enter numbers separated by space: ").split()))  
  
print("List after removing all duplicates:", duplicates_removal(nums))
```
