Q.24) Finding the mode of list of numbers(A number that appears most often is the mode).

```python
from collections import Counter

def mode():
    numbers = list(map(int, input("Enter numbers separated by space: ").split()))
    freq_dict = Counter(numbers)
    max_freq = max(freq_dict.values())
    MODE = [key for key, value in freq_dict.items() if value == max_freq]
    print(f"The mode(s) is/are: {MODE}")
mode()
```
